Architectural engineers translate designs into buildings that work—safer structures, smarter systems, and greener and more sustainable environments—and make great buildings better. Civil engineers tackle a broader set of problems ranging from transportation to construction and management.

Illinois Tech’s Armour College of Engineering has a 125-year legacy of educating engineering innovators. Our accredited Architectural (AE) and Civil Engineering (CE) degree programs will prepare you for a career as a design engineer, consulting engineer, construction manager, structural engineer, and more. Attending an accredited institution is a requirement for licensure—an essential for professional success. You’ll graduate ready to excel as a knowledgeable specialist in related areas of building design and analysis.

**AE and CE Specializations at Illinois Tech**
Receive your bachelor’s degree while specializing in an area of interest to you.
- Building Mechanical and Energy
- Acoustics and Illumination
- Structural Engineering
- Geotechnical Engineering
- Construction Engineering and Management
- Electrical and Illumination
- Fire Protection and Life Safety
- Transportation Engineering

**Research—Even As an Undergrad!**
Our faculty conduct cutting-edge research with real-world applications—and there are countless opportunities for undergraduates to participate.

Assistant Professor Brent Stephens (a.k.a. “Dr. Building”) runs the Built Environment Research Group, in which he and his students conduct research on energy efficiency and indoor air quality in buildings. They are currently engaging in EPA-funded research that is measuring and modeling the amount of outdoor pollutants such as ozone and particulate matter that infiltrate into homes across the country. Stephens maintains an unoccupied apartment unit in graduate housing for his research called STUDIO-E, or the Suite for Testing Urban Dwellings and their Indoor and Outdoor Environment.
Learn to Innovate in IPROs

In Illinois Tech’s signature Interprofessional Projects (IPRO) Program, you’ll work with students from various majors to solve real-world problems. Recent architectural and civil engineering-oriented IPROs include:

- Developing insights that support energy-efficiency improvement strategies for varied built environments
- The future of smart grids and improving the reliability of sustainable power
- Integrating hydroponics into the workplace environment
- Developing sustainable urban agriculture facilities in a South Side Chicago community
- Sustainable home design: Race to Zero competition

ARMOUR COLLEGE OF ENGINEERING AT ILLINOIS TECH

DISTINCTIVE EDUCATION

At Armour College of Engineering, we integrate innovative thought, entrepreneurship, creativity, and design with engineering theory, research, and practice. You will get the chance to work on projects that are normally open only to graduate students—and have the opportunity to apply what you have learned in the classroom to some of the most complex problems facing society today.

We enhance our college’s already strong curriculum with lecture series, forums, interactive problem solving, professional site exploration, and team-intensive engineering projects focusing on four themes: water, health, energy, and security. As you take part in these theme opportunities, your activity is tracked in your own personal online portfolio for use as a supplement to your résumé or as additional material for your application to graduate school.

Having a complete understanding of the research and development process will also help ensure your success after you graduate. Our Armour R&D Program includes two programs: Program for Undergraduate Research Education (PURE), which focuses on research, and Mentored Innovation and Development (MIND), which focuses on developing research-based technology. Both programs aim to give undergraduate students a hands-on experience with research and development that is unique to Armour College.

All distinctive education programs are designed to give you a competitive edge and tangible experience in global issues. Be confident in the fact that when you graduate from Armour College of Engineering, you will already be working on relevant and impactful solutions.

“Illinois Tech was my first choice when applying to college. It is exciting to be studying something that is so important and in demand, but it’s also rare since it combines multiple disciplines into one field of study.

I currently have an internship at an architectural engineering firm where I primarily work with mechanical engineers, and occasionally with electrical engineers. This internship has let me get a better idea of how everything comes together in industry, and understand which parts of architectural engineering I enjoy the most and would like to focus on. I hope to design sustainable and energy-efficient systems that make buildings more comfortable to live and work in. I would love to be able to incorporate renewable energy into projects whenever possible, and to utilize recycled materials and environmentally conscious construction practices.”

— Lindsey Rice
(Architectural Engineering/Architecture Minor, 4th Year), Portland, Oregon

EXPERIENCE IT

SEE WHAT HAWK LIFE IS ALL ABOUT!

Throughout the year we host a number of opportunities for you and your family to come check out everything you’d ever want to know about us!
