BE IT ALL HUMAN SCIENCES.

WHY HUMAN SCIENCES AT LEWIS COLLEGE?

CUSTOMIZED.

Technology is playing an increasingly large role in shaping how we look at our world—what we do and how we do it. In Lewis College of Human Sciences, we explore and explain what is happening as technology reshapes the real and virtual places where we live, work, and play. We use evidence-based methods to separate opinion from information and fad from fact.

Social consciousness is at the heart of our programs. Our students are well-versed in the hard work required to improve our world. You will be challenged to think critically, and will strive to solve complex human problems with the aid of sophisticated technology. At the same time, our programs emphasize the free spirit and broad perspectives traditionally reserved for the liberal arts. You will gain practical experience alongside faculty who are dedicated to bridging the gap between theory and application, ideas and action.

WORK IN THE LABORATORY OF OUR SOCIAL WORLD

At Lewis College you’ll approach your chosen field as a scientist, with an investigative, discerning eye. Our university’s focus on science and technology will support you in developing valuable skills, including technical research, data analysis, and digital communication. With a background in scientific thinking, you’ll be offering what today’s employers most urgently seek: an innovative employee with excellent problem-solving skills.

CHECK OUT THE LEWIS COLLEGE ADVANTAGE

Though hundreds of colleges and universities offer programs in the humanities, psychology, and social sciences, our students have the distinct advantage of studying alongside engineers, architects, scientists, and businesspeople. We offer a select group of students the environment to explore their full potential.

At Lewis College of Human Sciences you will:

- Share your passions with a faculty mentor. We regard mentoring and cross-disciplinary networking as cornerstones of our distinctive education.
- Engage in meaningful discussions with other inquisitive people. We purposely keep our classes small to increase your interaction with some of the best professors in the country.
- Participate in research projects. This real-world, practical experience will help launch your career or get you into the graduate program of your choice.
- Accelerate your professional advancement by opting to complete a dual-degree program. Specific options are listed on the opposite panel.
- Take part in collaborative, interprofessional projects (IPROs). These team assignments bring together students, faculty, and industry representatives from a variety of disciplines to develop integrated solutions to real-world problems.

RELEVANT RESEARCH OPPORTUNITIES

In Lewis College you’ll have many chances to get involved in exciting, timely, and significant research projects. You’ll be able to immediately apply what you have learned in class and gain a critical advantage when you enter the workforce. Our faculty are working on topics that have local, national, and global significance.

A sample of current topics includes:

- Interventions that leverage technology to promote healthier choices (physical activity, healthy eating, etc.) (Arlen Moller)
- Science and technology policy, international relations, the global political economy, and comparative politics; policy and relations in Korea and Taiwan (Matthew Shapiro)
- New media technologies, digital culture, and video game design, including gender and violence in video games (Carly Kocurek)
- The development of communication among infants; statistical methods for the study of small social networks (Jennifer Miller)
