Excellence doesn’t happen overnight. At Illinois Tech innovation and achievement is a story 127 years in the making.

It began in 1890, when a giant of Chicago’s industry established a university to educate talented people capable of harnessing technology and leading the city into the great industrial era of the early twentieth century.

Since then Illinois Tech has embraced the same pioneering spirit of invention and discovery. Our community of exceptionally smart graduate students and faculty is driven to rethink the known and bring new ideas into the world. As a result our graduate alumni have changed the course of human history, giving us the cell phone, the Pentium chip, Linksys, the Telestrator, architectural marvels, and many other innovations that have revolutionized the world.

As a graduate student at Illinois Tech, you will surround yourself with passionate people who share your quest for discovery. Here you will find a one-of-a-kind graduate experience—one that offers hands-on learning, expert guidance, and world-class resources. You will explore what motivates you and create your own excellence.

Changing the world is serious work. Join us.

Illiinois Tech is #1 in Illinois for highest average salaries of non-M.B.A. master’s graduates (PayScale 2017)
WHAT MAKES A LEGACY?

When you step foot on Illinois Tech's landmark campus, one of the first things you might notice is our lack of ivy-covered walls. Illinois Tech is a university rich with tradition, but we offer a new vision for what constitutes academic and research excellence in the twenty-first century. It is less about legacy and more about upending the status quo. It is not about simply breaking down walls, but rather shattering their very purpose and constructs. It is about redefining words like innovation at a time of extraordinary growth and invention.

Our history is strong, but we don't need ivy to tell you we have been around for a while. Our story is rooted in our accomplishments, and our legacy is told in our countless alumni who continue to change the world.

Illinois Tech is proud of our hometown, and we see a product of our city's culture. We value hard work, ambition, community, bold thinking, and rebelliousness. Just like the great global city of Chicago.

Chicago offers graduate students an unparalleled environment to study, conduct research, and explore a diverse range of intellectual and professional pursuits. From medicine to financial markets and from high-tech startups to nonprofits, Chicago provides countless pathways in life. The city's burgeoning tech ecosystem feeds growth in multiple sectors including science, law, management, energy, and marketing and creative industries.

Chicago is also a friendly and charming city of neighborhoods, rich with cultural attractions including museums, music venues, parks and nature, plus professional sports venues and many other opportunities to explore something new.

OUR HOMETOWN IS AN ARCHITECTURAL LIVING LABORATORY

Chicago is a living laboratory for architecture study. From iconic consulting by Adler, Coed and Lilly Paul to iconic buildings such as the John Hancock Center and Marina City, many notable built spaces in Chicago are often the work of past or present Illinois Tech students, alumni, faculty, or firms.

Chicago is:

• World’s seventh most flourishing tech ecosystem—Compass Global Startups Ecosystems Report 2015
• Top 10 city of global opportunity—PwC 2014
• Top 10 U.S. city for tech careers—CIO magazine

Illinois Tech's Mies Campus is less than a mile from Lake Michigan and the city's stunning 18 miles of beachfront.

“One of America’s Most Beautiful College Campuses” —Forbes
Illinois Tech is a small, private university focused on technology and innovation. This enables us to be nimble and agile in a way that larger universities cannot. It also translates into personalized attention for our graduate students, allowing students to explore outside traditional boundaries of academia. Our graduates are exceptionally prepared to lead and achieve after graduation.

ILLINOIS TECH GRADUATE STUDENTS.
IN THEIR OWN WORDS.

In 2017 surveys and focus groups, here are just a few of the ways current graduate students described Illinois Tech:

• Diverse
• Friendly
• Multidisciplinary
• Experienced professors
• Emerging fast
• Conferences and lectures held every week
• Maximum possibilities to find a good job
• Innovation
• Opportunities for entrepreneurship
• Tech focused
• In one of the most beautiful cities in the world
• Freedom of thoughts and expression
• Professors are helpful and you feel that they really care
• Close to downtown
• Wide variety of courses and possibility to pick courses from other degree programs

For a list of all degrees and programs, including certificate courses, visit admissions.iit.edu/graduate/programs.

Each of our colleges is accredited by the leading accreditation authority. Illinois Tech is accredited by the Higher Learning Commission of the North Central Association of Colleges and Schools.
FACULTY AND RESEARCH, ACCESS AND IMPACT.

It may come as no surprise that Illinois Tech—home of the country’s first research nuclear reactor and the university that operates the nation’s first functional microgrid—is known for advanced research that is moving the needle toward significant innovation.

Through our academic departments, and our research centers and institutes, we offer graduate students the opportunity to participate in meaningful, hands-on, and boundary-breaking research. Illinois Tech’s research partnerships with locally based national laboratories such as Argonne and Fermilab, leading medical schools, tech incubators, and government organizations provide our graduate students unparalleled experiences and training at world-class facilities.

Our professors include editors of scientific journals, entrepreneurs, influential design and architecture practitioners, academic society fellows, and thought leaders in numerous fields. As important, our faculty are excellent teachers, uniquely regarded for their accessibility to students and for their commitment as advisors and mentors. You will receive personalized guidance during your graduate course of study.

GOOD HEALTH BY DESIGN

Illinois Tech’s Institute of Design, founded as the New Bauhaus, is the pioneer of user-centered design. Professor Kim Erwin (M.Des. ’94) directs ID’s multidisciplinary Center for Collaborative Healthcare Design, which conceptualizes and tests novel concepts in health care delivery and disease management. The CFCHD works on multi-institution grant-funded projects, including a one-year $1.5 million National Institutes of Health-funded endeavor to improve outcomes for children and adults with sickle cell disease.

Illinois Tech’s extensive research endeavors include the activities of 30-plus research centers and three larger research institutes: Pritzker Institute of Biomedical Science and Engineering, Wanger Institute for Sustainable Energy Research, and the Institute for Food Safety and Health.

I am happy to be in Chicago, as the city is a case study not only of great examples of architecture and landscape architecture, but a firsthand view of how other designers and leaders—some of whom have been my professors—have tackled the biggest issues芝加哥.

—STEPHEN ULMAN (MASTER OF LANDSCAPE ARCHITECTURE), NAVARRE, FLORIDA

Ulman worked as a research assistant on the Driverless City project, a finalist for Illinois Tech’s $1 million Nayar Prize I, where he gained new insight into the opportunities and challenges surrounding revitalized use of an older landscape.
In their collaboration for the Elgin (Illinois) Police Department, this team of Illinois Tech researchers is exploring the design, implementation, and deployment of a flexible, new model for crime prevention that can be translated to a wide array of communities in the United States and beyond, thereby achieving far-reaching societal impact. The team will assess Motorola Chair Professor Miles Wernick’s predictive modeling technology alongside a legal-ethical framework. Their goal is to determine how to best employ this technology in crime prevention in a way that respects privacy rights and achieves acceptance by the community.

The project builds upon Wernick’s high-profile work under the auspices of a $3 million award from the National Institute of Justice where he partnered with the Chicago Police Department to institute a new predictive policing program. His company, ADM Diagnostics, LLC, focuses on the use of machine learning algorithms to diagnose Alzheimer’s disease.

WESLYNNE ASHTON AND NASRIN KHALILI, STUART SCHOOL OF BUSINESS

In the project Pathways to Cleaner Production in the Americas, supported by the Department of State, professors Weslynne Ashton and Nasrin Khalili (Ph.D. ENVE ’92) collaborated on a multinational effort to address issues preventing a move toward sustainability in Latin America and the Caribbean. Backed by more than $1 million in funding, the project researched the demand for environmentally friendly industrial development strategies and the limited number of skilled professionals to implement such strategies. The project team trained hundreds of students across the region in interdisciplinary skills and methods while also exposing 136 micro, small, and medium-sized enterprises to cleaner production practices. The researchers looked at everything from how market-based incentives and access to capital spur smaller enterprises to adopt cleaner production practices, to the design of educational models that will adequately prepare individuals who can support development.

EVA KULTERMANN, COLLEGE OF ARCHITECTURE

Professor Eva Kultermann (left, first row) leads design studios that are having a direct and meaningful impact on Chicago’s Bronzeville neighborhood. Last year, students in her studio developed the design selected for the future home of the Bronzeville Turn Center, which will provide a new approach to combat violence and social services. This year students in her studio are working to design a community services center that will provide counseling, mentorship, workforce development, and other social services aimed at minimizing negative factors that cause violence, while increasing protective influences that foster community.

BILL LIDINSKY, SCHOOL OF APPLIED TECHNOLOGY

Industry Professor and Director of the Cyber Forensics and Security Laboratory Bill Lidinsky (EE ’61, M.S. ’70) developed and honed much of his cyber security and cyber forensics expertise at Illinois Tech. While at Bell Laboratories and Fermilab, Lidinsky and members of a committee developed the spanning-tree system standard that is now used in almost every computer-network router throughout the world. Over the past four decades, he has become a leader in several areas of computer networking and security, and is regularly called upon to testify as an expert witness for government agencies on such matters.
Illinois Tech has an extensive network of state-of-the-art facilities across our four Chicago-area campuses that are focused on research and innovation. Just a few of these facilities include:

• **Idea Shop**
  - 13,000-square-foot rapid-prototyping lab with 3-D printers, CNC milling machines, wood cutters, and a staff dedicated to helping students transform ideas into products.

• **Robert B. Kyts Design Studio and Machine Shop**
  - Nationally renowned prototyping and machining provider for small-quantity custom projects, specializing in model building, wind tunnel modeling, one-of-a-kind prototypes.

• **Architecture Materials Lab**
  - 10,000-square-foot lab with tools and machinery for working with wood, metal, and plastics, in addition to a laser cutter and 3-D printers.

• **Libraries**
  - A five-library network offering a diverse range of research journals, staff who provide research and writing assistance, laptop rental, 3-D printers, and many other resources, with separate libraries for law, architecture, food safety, and ethics scholarship and training.

• **Center for Synchrotron Radiation Research and Instrumentation**
  - Operates the BioCAT and MR-CAT X-ray beamlines at the Advanced Photon Source at Argonne National Laboratory.

• **Financial Markets Research Lab**
  - Dual-monitor Bloomberg work stations that allow screen sharing from Bloomberg terminals.

• **Facilities in the School of Applied Technology**
  - Include sophisticated labs for embedded systems, real-time communications, and more.

• **Facilities for food safety**
  - Include the Biosafety Level 3 (BSL-3) laboratory, one of the first in the country specifically designed to study the behavior of pathogens and prevent agents in real-world food processing conditions.

• **Judge Abraham Lincoln Marovitz Courtroom**
  - Modeled on the best courtrooms and trial advocacy training facilities in the country, incorporates the latest computer and audiovisual technologies in a traditional setting.

Once completed, this new facility will be an **innovation hub** on campus focused on bold thinking and transforming new ideas into products and processes. The Kaplan Institute will house workshops, media labs, classrooms, collaborative hubs, emerging technologies, and maker spaces, and incorporate design thinking into courses taught within it.
Illinois Tech is a pioneer in this area, which is just one example of a general field of interest for many students. Outside of specific degree programs, students can take part in a wide range of interdisciplinary work to expand their knowledge base and explore relevant topics within a field of interest. This includes research centers, faculty research assistance, certificate programs, free lectures and seminars, and more opportunities. The same is true for many pathways, from design to computational science to health.

**CERTIFICATES**
Programs include topics such as water and wastewater treatment, current energy issues, electricity markets, sustainable enterprise, indoor air quality, and more.

**PARTNERSHIPS**
Illinois Tech has a strong network of partners in the academic, research, and public and private sectors. The university’s decades-old relationship with Argonne National Laboratory includes faculty and graduate student research in a range of energy and sustainability domains, from alternative fuels to the microgrid.

**ENERGY AND SUSTAINABILITY**
Bannockburn Solar Park, which is just one example of a broad list of current projects, is supported by funds from Hobbs, the company that organized the site visit. The projects aim to be both practical and exploratory, and each explores different aspects of renewable energy.

**PROGRAMS**
Applying Energy, Biology, Chemistry, Physics, Law, Sustainability Management.

**ENERGY AND SUSTAINABILITY**
Bannockburn Solar Park, which is just one example of a broad list of current projects, is supported by funds from Hobbs, the company that organized the site visit. The projects aim to be both practical and exploratory, and each explores different aspects of renewable energy.

“During my first semester, my studio professor recommended me to a colleague for an internship. I hadn’t even talked to my professor about looking for work, but his professional network was able to get me in the door. I was essentially handed a job interview.”

—MARK BRIAN SZOSTAK
(MASTER OF ARCHITECTURE), WARRENVILLE, ILLINOIS

Szostak is an architecture design intern at Exp US Services, where he is working on a renovation and addition to Chicago’s CTA 95th/Dan Ryan Red Line Station.

“UNUSUALLY DRIVEN. It’s impossible to define the “typical” Illinois Tech graduate student. Like the university itself, our diverse students challenge all expectations. While each has their own commitment to excellence and their passion for discovery, whether furthering their careers in a certificate program, launching cutting-edge businesses, or conducting Ph.D. research in a novel topic, we’re all united by the fact that the impossible is possible because it is a university where the curious, ambitious, and driven student finds unlimited opportunities to advance and succeed.”

MICHAEL ANTHONY DEANDA
(MASTER OF SCIENCE IN TECHNOLOGY AND HUMANITIES)
EL PASO, TEXAS

DeAnda is a graduate assistant, student lab assistant, instructor, and researcher. He is also a co-coordinator of Screen Time: A Symposium on Media for Children Ages 0 to 8. His dissertation research studies game spaces that promote subversive gender performances.

“The structure of academic programs at Illinois Tech all afford anyone working with students from other academic disciplines. The diversity of the campus also creates opportunities to engage with people from different walks of life, and having my experience, working in productive spaces is encouraged by the faculty.”

STEVENXAVIER SALA
(MASTER OF SCIENCE IN FINANCE)
BAYONNE, NEW JERSEY

Sala conducted research with Assistant Professor Sang Baum “Solomon” Kang to estimate and analyze volatility in natural gas and electricity markets for purposes of energy plant valuation and to help inform clean energy policy decisions. He also worked as a research intern with a trading group in the Chicago Board of Trade, modifying option pricing models and optimizing code, and developing risk models specific to the United States Department of the Treasury’s derivatives market.

“If you want to get a grad-level degree in biology and you are looking for a school where you will get personalized attention and research opportunities, Illinois Tech is a great option. There are several labs that accept new grad students every year and offer a good variety of disciplines and projects, so you can find what you like best.”

ADRIANA MAÑAS NÚÑEZ
(PH.D. CANDIDATE BIOLOGY)
MADRID, SPAIN

Núñez is the co-founder of Great Lakes Neuroscience, a pharmaceutical startup that is developing a novel treatment for ALS and MS and won the 2016 National Institutes of Health NeuroStartup Challenge. In Professor Jialing Xiang’s lab, Núñez is newly discovered pro-apoptotic BaxD2, a molecule that triggers cell death through an alternative pathway. A better understanding of cell death will lead to the development of new drugs and medical devices to diagnose and cure a variety of diseases.

“If you want to do graduate research in the arts and design, especially in the field of architecture, I highly recommend Illinois Tech. It is an exceptional university that offers an outstanding education and pushes you to the next level. The faculty is extremely dedicated and the support team is always there for you.”

OUTCOMES. ALUMNI HISTORY OF EXCELLENCE.

Illinois Tech is ranked #1 in Illinois for the highest average salaries of non-M.B.A. master’s graduates (PayScale 2017). Students graduate with advanced degrees that have significant value in the marketplace. Illinois Tech alumni are evidence of this return on investment. Our graduate alumni have changed the world and highlight how Illinois Tech is making good on our vision to shape the future.

• Rajeev Chandrasekhar (M.S. CS ‘88) Part of the team that developed Intel's Pentium chip
• Lois Graham (M.S. ME ’49, Ph.D. ’59) The first woman in the United States to earn a doctorate in mechanical engineering
• Marvin Camras (EE ’40, M.S. ’42) Pioneer in magnetic recording technology
• David Edwards (Ph.D. CHBE ’87) Harvard University professor and founder of Le Laboratoire, a cultural center fostering experiments at the frontier of science
• Leonard Reiffel (EE ’46, M.S. ’48, Ph.D. ’52) Inventor of the Telestrator (used to highlight sports plays on TV)
• Victor Toan (M.S. ’98) Founder of Linksys
• Martyn Karlin (M.A. ’44, M.S. ’47) National Medal of Science awardee who contributed to advances in the internet and computer networks
• Tsv Zhang (CS ’04, Ph.D. ’07) Head of Autodesk’s Virtual Design and Construction Laboratory of the International ASSO – the American Society of Architectural升学
• John F. Carrasco (B.S. ’80, M.S. ’84, Ph.D. ’90) Founder and CEO of Global Bioenergetics
• Phyllis Lambert (M.S. ARCH ’63) Design visionary behind New York’s Seagram Building and founder of the Canadian Centre for Architecture
• Arvind Khajuria (Ph.D. EE ’08), University of Maryland professor with more than $5 million in research grants and an expert for the National Science Foundation’s Nanoscale Science and Engineering Initiative
• Anil Choudrey (Ph.D. CS ’96) Former chief architect of research for AOL, co-founder of search engine Ask.com and one of the 430 scientists of Twitter upon its launch in 2006, he is currently head of innovation and strategy for Dentsu, which develops customized solutions for global clients
• Countless civic and government leaders, including two current members of the United States Congress
